

A Project Report on

TOURISM MANAGEMENT SYSTEM

Submitted by
M.MAHESWARI(R161702)
R.GOWTHAMI(R171071)
M.YAMUNA(R161251)
E.TEJASREE(R161066)

Submitted to

Under the supervision of
Mr.A Mahendra
Assistant Professor
Department of Computer Science and Engineering

As a part of
Partial fulfillment of the degree of Bachelor of
Technology Computer Science and Engineering.

Date: 17-09-2022

CERTIFICATE

This is certify that the project entitled “TOURISM MANAGEMENT SYSTEM”
submitted by

M.MAHESWARI(R161702)

R.GOWTHAMI(R171071)

M.YAMUNA(R161251)

E.TEJASREE(R161066)

Under our guidance and supervision for the partial fulfillment for the degree Bachelor of Technology in Computer Science and Engineering during the academic semester -II 2021-2022 at RGUKT, RK VALLEY. To the best of my knowledge, the results embodied in this dissertation work have not been submitted to any University or Institute for the award of any degree or diploma .

Mr.A MAHENDRA

Project Guide,
Assistant Proffessor,
Computer Science and Engineering,
RGUKT,RK Valley.

Mr.HARINADHA

Head Of The Department,
Assisstant Proffessor,
Computer Science and Engineering
RGUKT,RK Valley.

DECLARATION

We hereby declare that this report submitted by us under the guidance and supervision of Mr.A Mahendra is a bonafide work.we also declare that it has not been submitted previously in part or in full to this university or other university or institution for the award of any degree or diploma.

Date: 18-09-2022,
Place: RK Valley.

M.MAHESWARI(R161702)
R.GOWTHAMI(R171071)
E.TEJASREE(R161066)

Acknowledgement

The success and final outcome of this project required the lot of guidance and assistance from many people and We are extremely privileged to have got this all along the completion of Our project. All that We have done is only due to such supervision and assistance and we would not forget to thank them.

We would like to express our sincere gratitude to Mr.A Mahendra for valuable suggestions and keen interest throughout the progress of Our course of research.

We are grateful to our Mr.HARINADHA HOD CSE, for providing excellent computing facilities and a congenial atmosphere for progressing with our project.

At the outset, We would like to thank Rajiv Gandhi University of Knowledge and Technologies, R.K Valley for providing all the necessary resources for the successful completion of our project work.

With Sincere Regards ,

M.MAHESWARI(R161702)
R,GOWTHAMI(R171071)
M.YAMUNA(R161251)
E.TEJASREE(R161066)

Abstract

This project “TOURISM MANAGEMENT SYSTEM” is used to automate all process of the travel and tourism, which deals with creation, booking and confirmation and user details. The project is designed HTML-PHP as front end and Microsoft SQL Server 2008 as backend which works in any browsers. The coding language used HTML and PHP. Travel and tourism management system is used to book a tour from anywhere in the world by a single dynamic website which will help the user to know all about the places and tour details in a single website. The admin can add packages to the website from a certain travel agents and hotels by create a tour page. Then the users can sign in and book each project, they can be confirmed by the admin in their manage booking page. The user can see the confirmation in their my booking page. It is an easiest platform for all travelers which can be easily booked and know the all details.

1. TITLE

Tourism Management System

PROPOSED SYSTEM:

The proposed system is a web based application and maintains a centralized repository of all related information. The proposed system maintains centralized repository to make necessary travel arrangements and to retrieve information easily.

The system allows one to easily access the relevant information and make necessary travel arrangements. Users can decide about places they want to visit and make bookings online for travel and accommodation .

The tourism management system allows the user of the system access all the details such as weather, location, events, etc. The main purpose is to help tourism companies to manage customer and hotels etc. The system can also be used for both professional and business trips.

This particular project deals with the problems on managing a tour and avoids the problems which occur when carried manually.

2. INTRODUCTION

Travel and Tourism management system is an online project to provide the complete information about the vehicles available for a tour. There are 2 different types of users. First the customer visits the site and enters the place from where to where he wishes to travel. He also provides the date as when he would like to travel. Then he sends these details to the travel and tourism agency. The employee of travel and tourism agency receives the mail and check which vehicle is available for that day and reverts back to the customer along with the quotation.

If the customer agrees for any one of the quotation, he can reply back along with agreed quotation. Then the agency will take down all the details of the customer and will send a confirmation message to the customer. On the day of the tour, the customer first must show the confirmation message to the driver for clarity and only then he will agree to drive after looking at the confirmation message. This software is user friendly and helps in finding the vehicle sooner rather than wandering manually everywhere to find for vehicles. Before the tour starts, half payment has to be done.

After the customer returns or reaches his final destination, he must pay full amount either through cash or through cards. After the travelling the customer can come back to the site and enter his feedback about the travel and tourism agency. If any good feedback will be taken positively and if any negative feedback too will be taken positively and try to improve what had lacked. The report is also generated periodically and the database will be cleared according to the time.

OBJECTIVE

The objective of the Travel and Tourism Management System project is to develop a system that automates the processes and activities of a travel and the purpose is to design a system using which one can perform all operations related to traveling .

APPLICATIONS

This application is built such a way that it should suits for all type of blood banks in future. So every effort is taken to implement this project in this blood bank, on successful implementation in this blood bank, we can target other blood banks in the city.

This application consists following modules:

Administrator module:

This module provides administrator related functionality. Administrator manages all information and has access rights to add, delete, edit and view the data related to places, travels, routes, bookings, restaurants etc.

Travels module:

This module provides the details of various travel agencies. A user can select appropriate agency depending on convenience and accessibility.

Routes module:

This module provides information related to various routes connecting sources and destinations. For each route, information such as source, destination, fare, reservation details, pick up points etc are provides. Only administrator can add ,delete, edit and manage the data. Users can only view the information.

Reservations module:

This module provides functionalities that allow a user to book tickets or cancel previously booked tickets. The module maintains the details of all reservations made so far and allows administrator to either confirm or reject the bookings.

3. Tools and Technologies Used

FrontEnd : HTML and CSS3

BackEnd : PHP

Database : MySQL

Tool : Xampp

3.1 HTML :

HTML stands for **Hyper Text Markup Language**. HTML is the standard markup language for Web pages.

HTML elements are the **building blocks** of the HTML Markup. HTML elements consist of start tag, end tag and content in between them.

3.2 CSS3 :

CSS stands for **Cascading Style Sheets**. It describes how HTML elements are to be displayed on screen, paper, or in other media. CSS saves a lot of work. It can control the layout of multiple web pages all at once.

3.3 PHP:

PHP stands for Hypertext Preprocessor. It is a server side scripting language that is embedded in HTML. It is **used** to manage dynamic content, databases, session tracking, even build entire e-commerce sites. It is integrated with a number of popular databases, including MySQL, PostgreSQL, Oracle, Sybase, Informix, and Microsoft SQL Server.

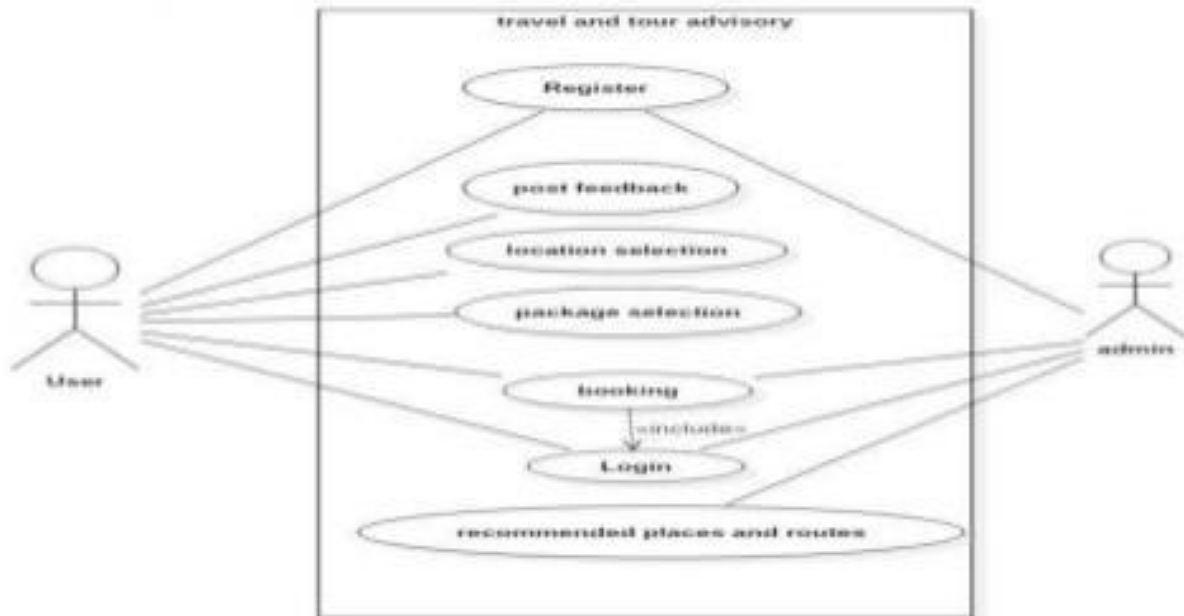

3.4 MYSQL:

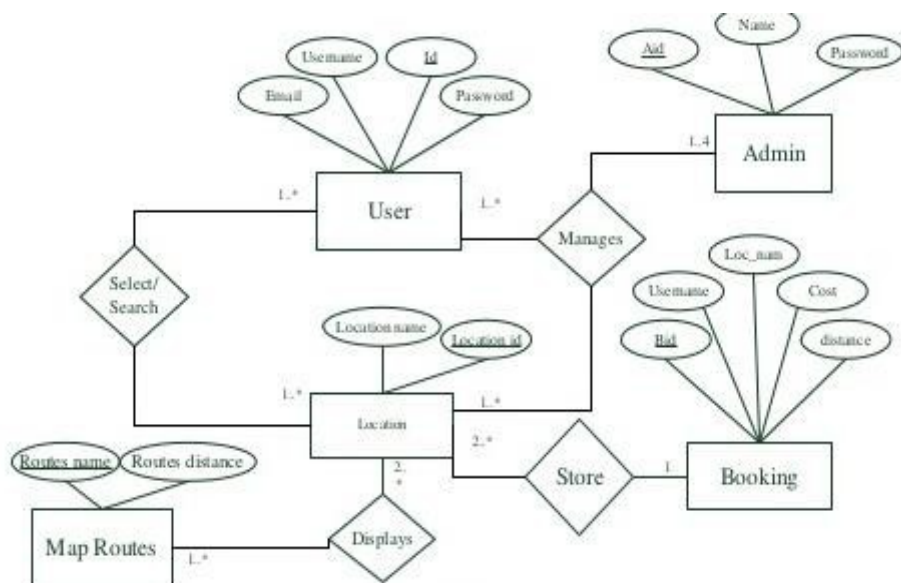

MySQL is a freely available open source Relational Database Management System (RDBMS) that uses Structured Query Language (SQL). SQL is the most popular language for adding, accessing and managing content in a database. **MySQL** is an essential part of almost every opensource PHP application.

User Login Page:

The screenshot shows the same web browser window as the registration page. A modal window titled "Signin with your account" is centered on the screen. It includes social login buttons for Facebook and Google, and a form with fields for "admin" (username) and a password field with four dots. A "Forgot password" link is below the password field. A green "SIGNIN" button is at the bottom. A disclaimer at the bottom of the modal states: "By logging in you agree to our [Terms and Conditions](#) and [Privacy Policy](#)".

8.FUTURE SCOPE

Tourism is growing and so is the scope in tourism increasing. There is a good employment in the tourism sector. Thus to grab such opportunities you need to prepare yourself with the knowledge in tourism.

Any tourist agency can make use of it for saving customer details in database.

Tourism group can use it for managing their location, hotel, vehicles details.

This application can easily be implemented under various situations.

We can add new features as and when we require. Reusability of this application is also possible.
